

# Cresolat®

*Antiseptic liquid for root canal*

## Prescription

Cresolat used in endodontic dentistry for antiseptic treatment of root canals and caries cavities.

## Composition and main characteristic

Cresolat is a liquid, easily penetrates even in bad-passable canals. It contains in its composition: p-chlorophenol - active antibacterial agent; camphor and thymol, which have antiseptic and sedative properties.

Quickly and effectively reduces the painful reactions, has a strong anti-inflammatory and anti-allergic effect.

Non-irritating Cresolat make possible to come closer to the pulp or to the apex without danger to cause a strong reaction.

## Method of application:

Cotton balls (or turunda) saturate in liquid Cresolat should

be placed in the pulp chamber at a distance from the apex. Close cavity by temporary cement and leave for 3-4 days. In the next visit the canal have to be processed by Cresolat and filled.
